

World-class Quality in vivid colours!

Firm on quality. Driven by excellence.

Arihant Polyplast Private Limited is an ISO 9001:2015 certified leading color and additive masterbatch manufacturing company. We carry a strong legacy of unflinching quality and impeccable customer service since last 15 years.

At Arihant 'Quality Comes First' and it reflects in our stringent quality checks, right from procurement of raw material to delivery. We believe in constant innovation for customised and cost-effective products for our clients.

Our high quality polymer products have found various applications in different industrial sectors

including automotive, wires & cables, footwear, packaging, medical applications, pipes, building & construction, home appliance, blow molding and industrial appliances. Using a broad range of pigments, dyes, additives and base resins, we create specialty grade master batches to best suit your specific application needs.

At Arihant we believe in 'Conserving for tomorrow's generations'. We use technologies to minimise our carbon footprint and at the same time have regularly undertaken 'green drives' to preserve our environment. Arihant Polyplast Private Limited quality products serve today and care for tomorrow.

Cutting-edge Manufacturing. World-class Quality.

Our top-of-the-line manufacturing facility develops a range of color masterbatches, black masterbatches, white masterbatches, additives masterbatches and UV masterbatches & masterbatches for various polypropylene applications like PP non-woven application.

We adapt latest technologies for seamless production and customisation according to our clients' desired specifications. Our manufacturing equipment includes world class extruders, mixers, grinders, dryers and pelletizers. We also have a resourceful R&D facility to keep us a step ahead in the world of ever evolving technologies.

A wide array of products.
Appreciated across industries.

White Masterbatches

We make polymer specific masterbatches with various loadings of Titanium Dioxide (TiO₂) for maximum whiteness index, dispersion and desired opacity of a product.

Additive Masterbatches

Our range of additive masterbatches include UV masterbatches, optical brighteners, Plastic Processing Aid (PPA), antioxidant and FR (Fire Retardant) offer remarkable opportunities to improve the performance of polymer products.

Customised Color Masterbatches

We design and develop these customized color masterbatches as per client specifications on colors, dosage and properties.

Black Masterbatches

We design various carbon loading black masterbatches for maximum jetness with high quality dispersion and high quality filter index for an extended pack life.

Special Effect Masterbatches

Appearance is an important aspect for plastic application. We produce a beautiful range of special effect masterbatches like marble, fluorescent, pearl and metallic.

Single Pigment Dispersions

We use advanced polymer-specific technologies that incorporate directly into base resins for optimal compatibility, proper viscosity and full dispersion.

COVID-19 Essentials

We have designed special medical white, medical blue, medical green, antimicrobial, hydrophobic, lamination grade colors especially for COVID-19 essentials.

A multitude of products for a variety of applications.

Master Flow™ - Arihant Masterbatches for Plastic Applications

Master Spin™ - Arihant Masterbatches for Textile Applications

POLYESTER (PET)

Our single pigment mono batches, custom color masterbatches, white, black and additive masterbatches add value to Fully Drawn Yarn (FDY), Partially Oriented Yarn (POY) and Staple Fibres.

PP NONWOVEN

We are having a wide variety of developed shades in our library as per market requirements for PP-Nonwoven applications. We have special masterbatches like medical/surgical blue, green and white for medical & surgical applications used in protective kits of COVID-19.

CARPET AND RUGS

We have a wide range of color and additive masterbatches for polyester fibers used in commercial and residential carpets and rugs. We offer quick response and tailor-made solutions for bulk continuous fiber (BCF), heat-set cut pile, tufted and woven carpets.

APPAREL, SPORTSWEAR AND UPHOLSTERY

Arihant Polyplast supplies color and additive masterbatches that deliver durability, brightness, UV stability, flame retardant and antibacterial properties to support and improve performance of products in this industry.

AUTOMOBILE

Arihant's dispersion technology commits to high levels of color consistency and product performance as demanded by the automobile industry.

WOVEN FABRICS

Our color masterbatches, additive and combo-batches give excellent process and utility performance to the woven sacks industry supporting fertilizers, cement, sugar, food grains, salt, flour, cattle feed, seeds, sand, chemicals and many more such items.

ROPES, FISH NETS, SPORTS NET AND AGRI NETS

Arihant Polyplast understands and operates to deliver the highest standards for color and critical additives masterbatches. Lives often depend on the performance of technical fibres like mono- and multifilament yarns. Our strong expertise takes in the spinning performance of your production line for the utmost fulfillment of the physical properties of the produced multifilament.

LUGGAGE, HOUSEHOLD PRODUCTS AND OTHER MOULDING APPLICATIONS

We have our expertise and a range of products for plastic injection, blow moulding applications and extrusion processes. We also offer customized special effect masterbatches such as pearl, metallic and special surface feel masterbatches as per customer requirement.
